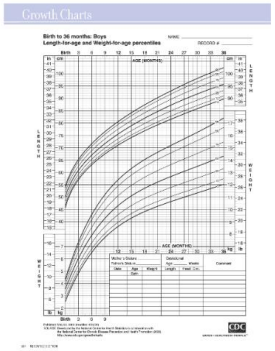
Global Child Health

13. Recognize that primary health care brings people into first contact with the health system and is the most inclusive, effective and efficient approach to enhance people's physical and mental health, as well as social well-being, and that primary health care is the cornerstone of a sustainable health system for universal health coverage and health-related Sustainable Development Goals, as was declared in the Declaration of Alma-Ata and reaffirmed by the Declaration of Astana;

World wide children are measured, examined, developmental screened, and vaccinated in

Preventive child health



Growth
Development
Physical examination
Vaccination

2015 Recommendations for Preventive Pediatric

Bright Futures/American Academy of Pediatric

amily is unique; therefore, these Recommendations for Preventive Pediatric Health Care are care of children who are receiving competent parenting, have no manifestations of any problems, and are growing and developing in satisfactory fashion. Additional visits may ıry if circumstances suggest variations from normal.

al, psychosocial, and chronic disease issues for children and adolescents may require ıg and treatment visits separate from preventive care visits.

These guidelines represent a consensus by the American Academy of Pediatri Bright Futures. The AAP continues to emphasize the great importance of conti comprehensive health supervision and the need to avoid fragmentation of care

Refer to the specific guidance by age as listed in Bright Futures guidelines Shaw JS, Duncan PM, eds. *Bright Futures Guidelines for Health Supervision o and Adolescents*. 3rd ed. Elk Grove Village, IL: American Academy of Pediatric

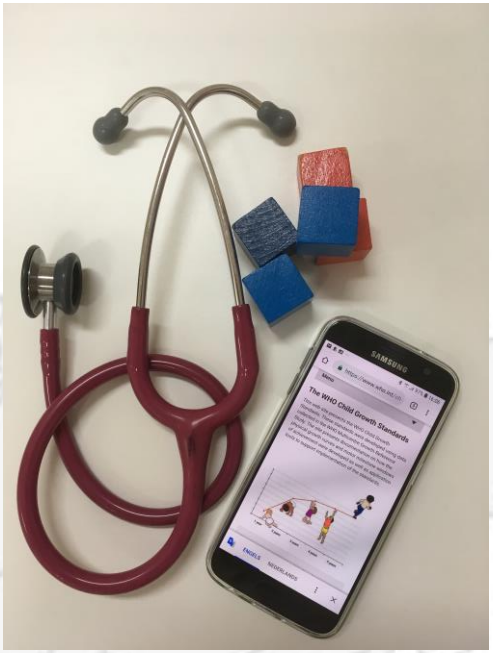
Data exchange by HL7



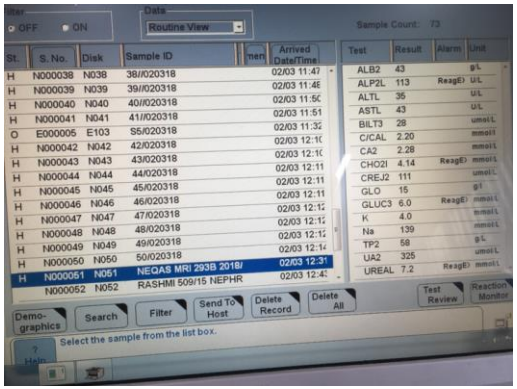
The Health Level Seven (HL7) standards are a set of international guidelines for transferring and sharing data between healthcare providers.

Codification	Meaning
ICD & Orpha code	International Code of Diseases / Orphanet code
ICF (-CY) 	The *International Classification of Functioning, Disability and Health for Children and Youth (ICF-CY)* is a derived versio the *International Classification of Functioning, Disability a Health* (ICF, WHO, 2001) designed to record characteristic the developing child and the influence of environments surrounding the child .
LOINC 	A universal code system for tests, measurements, and observations.
ATC 	The purpose of the ATC/DDD system is to serve as a tool for drug utilization research in order to improve quality of drug use.
ISO 9999 	ISO 9999:2011 establishes a classification of assistive products, especially produced or generally available, for persons with disability.
HPO 	The Human Phenotype Ontology (HPO) provides a standardized vocabulary of phenotypic abnormalities encountered in human disease.

World Health Organization

One global e- health model to harmonize interoperable child health
A core set of terminologies was identified:

1**) to identity the child in primary care**
-ICPC International Classification of Primary Care
-HPO Human Phenotype Ontology
-LOINC Standard for identifying health measurements, observations, and documents
2**) to classify the disease**
-ICD International Classification of Diseases
-ORPHAnet Classification of rare diseases
-OMIM Catalog of Human Genes and Genetic Disorders
3) **for follow up and treatment**
- LOINC Standard for identifying health measurements
- ATC Anatomical Therapeutic Chemical Classification System
- SNOMED Clinical health terminology
4) **for social support**
-ICF International Classification of Functioning, Disability and Health
Three different rare conditions were selected to compare the e-health services.



46. Expand the delivery of and prioritize primary health care as a cornerstone of a sustainable people-centred, community-based and integrated health systems and the foundation for achieving universal health coverage, while strengthening effective referral system between primary and other levels of care, recognizing that community-based services constitute a strong platform for primary health care;

Strenghtening effective referaal systems, between primary and other leves of care

This repository contains the FHIR resources for the "Een PGO voor iedereen" ("A personal healthcare environment for everyone") project.

Note: *All example content is example only!* It is based on Shwachman Diamond Syndrome (SDS) data from rarecare.world, but for brevity it is much shorter than the actual data would be.

1.1 MedMij and the "PGO for everyone" project

The Netherlands has a national effort, MedMij, to provide all Dutch citizens with a personal healthcare environment, web or mobile. However, persons with rare diseases have trouble seeing their condition properly represented. Due to the rare nature of their condition, vendors are hesitant to invest in small populations. Having a machine-readable Rare Condition profile would enable vendors to simply read the necessary data to provide those persons with customized dashboards, graphs and questionnaires to address their conditions properly. Moreover, healthcare professionals, patient organizations and researchers could all benefit from the structured collection of data.

The "PGO for everyone" project aims to provide such a machine-readable API for PGO's. The definitions for specific rare conditions are published as FHIR resources. PGO's can pull those in with an API, and use the definitions to provide disease-specific dashboards and questionnaires for those rare conditions.

1.2 The RareCare Data Model

The Rare Care models are maintained at https://rarecare.world

and (only partially complete yet) https://decor.nictiz.nl/art-decor/decor-datasets-zaz-

From those resources FHIR profiles are generated. The basis is a Data Model of Rare Conditions:
